01 / EXECUTIVE SUMMARY

Bata is familiar — but it is not first-choice.

The project identifies a potential perception and positioning gap among the surveyed young consumers.

PAST USAGE

78.6%

11 of 14 have purchased Bata

CURRENT PREFERENCE

0

Respondents chose Bata first

PURCHASE INTENT

3.0 / 5

Average consideration score

TOP REQUEST

6 / 14

Want more sneakers

THE CORE DIAGNOSIS

The issue may be less about product availability and more about **visibility, style relevance and youth-facing positioning.**

Bata already competes on affordability and offers sneakers through North Star and Power. Yet the exploratory sample still associates the brand more strongly with functional value than trend relevance.

02 / METHODOLOGY

From survey response to business recommendation.

A compact end-to-end analytics workflow designed to connect consumer evidence with strategy.

 **Research caveat** The sample is a convenience sample of 14 respondents. Findings are directional and exploratory — not representative of all Gen Z consumers in India.

03 / CONSUMER SNAPSHOT

The sample is sneaker-led and strongly value-conscious.

Three simple patterns shape the opportunity: footwear type, spend level and brand choice.

Source: Primary exploratory survey, n=14.

04 / PREFERENCE GAP

High familiarity is not converting into current preference.

The strongest story in the data is the drop between past usage and present-day choice.

78.6%

have purchased Bata

0

chose Bata first

3.0 / 5

average future consideration

WHAT THIS MEANS

Bata still has trust and memory. The challenge is turning that familiarity into active relevance at the moment of choice.

This makes brand perception and communication as important as product availability.

05 / PERCEPTION & BARRIERS

Bata wins on functional value — but style relevance is the friction.

The data points to a mismatch between what Bata is known for and what younger buyers want to feel.

HOW RESPONDENTS PERCEIVE BATA

KEY BARRIERS TO CHOOSING BATA

Signal: Protect affordability and quality — but strengthen style cues, sneaker visibility and awareness of newer products.

Source: Primary exploratory survey, n=14. Multi-response perception question.

POWER BI

07 / SECONDARY RESEARCH

The market context changes the diagnosis.

Bata already has youth-oriented sneaker products — so the issue is not simply “make more sneakers.”

Bata already has the product

North Star and Power sneaker/running options are currently visible from about ₹899 to ₹2,499.

Value competitors are aggressive

Campus and Red Tape lean heavily on accessible price points, variety and visible promotional discounts.

Premium brands sell culture

PUMA combines performance with trend-led icons, collaborations and stronger lifestyle storytelling.

POSITIONING MAP (ILLUSTRATIVE)

Implication: the likely gap is converting existing value + sneaker offerings into stronger youth perception and first-choice preference.

Sources: Bata, Campus Shoes, RedTape and PUMA India official websites; accessed Oct 2026.

08 / BUSINESS DIAGNOSIS

The opportunity is to shift from “known & functional” to “considered & contemporary.”

A clear target and positioning direction emerges from the combined evidence.

AS-IS

Known / previously purchased

Affordable / good quality

Sneakers available

Functional brand cues

TO-BE

Known + actively considered

Affordable + stylish

Sneakers visibly relevant

Functional + fashionable

PRIMARY TARGET

The Value-Conscious Trend Seeker

18–25

< ₹2,000

Sneaker-led

Needs Style · comfort · affordability

Barrier Outdated / low-excitement perception

Positioning direction

“Style that fits your life and your budget.”

Working hypothesis

The primary challenge may be perception and visibility — not absence of youth-oriented products.

09 / STRATEGIC RECOMMENDATION

BATA NEXT: keep the core strengths, modernise the youth-facing experience.

Four pillars translate the diagnosis into actions that can be tested before scaling.

01

Sneaker Visibility

Make existing youth products easier to discover across digital and store journeys.

02

Trend-Led Communication

Show styling, drops and outfit-led content — not only functional product claims.

03

Student Value

Test accessible price points, campus offers and “Under ₹1,999” merchandising.

04

Youth Engagement

Use campus creators, short-form video and micro-influencers to build salience.

Strategic rule: Do not replace Bata’s value identity — extend it into a more contemporary, visible youth proposition.

10 / ROADMAP & MEASUREMENT

Test → learn → scale.

A phased pilot reduces risk and creates measurable evidence before a broader rollout.

SUCCESS METRICS

Proposed KPI framework for pilot evaluation.

11 / CONCLUSION

The strongest opportunity is not to reinvent Bata — it is to reconnect it.

A focused pilot can test whether clearer sneaker visibility and contemporary presentation improve youth consideration.

FINAL RECOMMENDATION

Strengthen the connection between Bata's existing value proposition and younger consumers through:

- clearer sneaker visibility
- more trend-led communication
- accessible student-oriented pricing
- targeted youth engagement

**Pilot hypothesis**

Better visibility + contemporary presentation can improve consideration.

**Study limitation**

n=14 convenience sample. Findings are directional; validate with a larger pilot.
